

# Revu Tutorial: Check Spelling

Revu will automatically highlight your spelling mistakes within markups and form fields. While using the Typewriter tool or typing within a Text Box or form field, Revu will place a red squiggly line beneath any word that is misspelled. You can see suggested spellings for each word at any time by right-clicking on the word.

To run a spell check of all of your markups, click on the  **Check Spelling** icon, use keyboard shortcut “F7”, or select it from the menu *Edit/Check Spelling in Markups and Form Fields*. A window will open, allowing you to move through the document, correcting any misspelled words.

You can add specific words to the dictionary within the Check Spelling window or add entire dictionaries by going to *Edit/Preferences/Spelling*. Here you can choose a color to highlight misspelled words or toggle Enable Spell Check.

*Note: To see spelling errors in non-active text boxes, double-click inside of the box to activate the identified misspelled words.*
