

Revu Tutorial: Layers

Bluebeam PDF Revu includes a way to view PDFs with Layers, combine multiple PDFs into one Layered PDF, or save your markups as Layers.

Viewing Layers

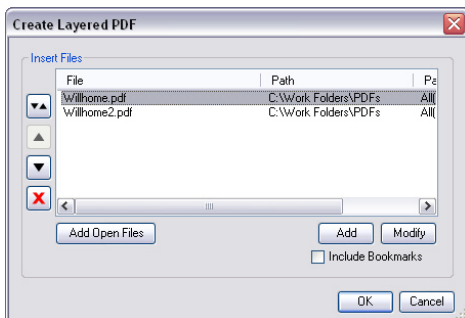

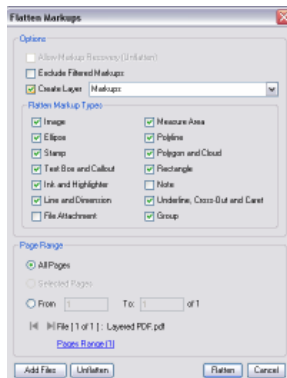

When opening a PDF file which contains Layers, Revu will ask you if you'd like to open the Layers tab for viewing. Click OK to open the Layers tab. You can also open the Layers tab by selecting *View/Tabs/Layers* (Alt+O) or right clicking on the tabs in the left panel.

To turn Layers on and off, click the  icon to the left of the Layer title within the Layers tab. The eyeball icon indicates if the Layer is visible or not.

Creating Layers

To save your markups as Layers in the PDF, create your markups and then select from the menu *File/Flatten PDF*. In the Flatten Markups dialog, check the box next to Create Layer, enter a title for your new Layer and click Flatten to save the markups as a new Layer in the PDF file.

To combining multiple PDFs into a single layered PDF, go to *File/Create Layered PDF*. Use the Create Layered PDF dialog box to select the PDF files you want to combine. You can combine PDFs you are currently working with by clicking Add Open Files or click Add to select other PDF files from your Windows folders. Click OK to create the new layered PDF file.
