# Revu Tutorial: Erase Content and Cut Content

Revu's Erase Content and Cut Content features let you quickly erase or move all underlying content from your PDF, respectively.

Erase Content

Quickly remove content on your PDF by going to *Edit/Erase Content*. Your cursor will change to a crosshair. Drag the rectangular dotted blue line over the part of the document you wish to remove and it will instantly erase.
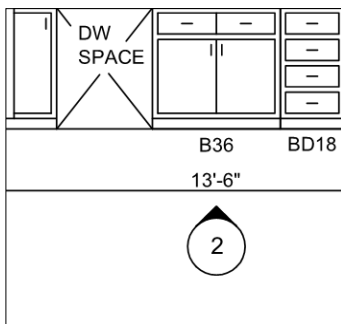

Unlike the Redaction feature (found in Revu eXtreme only), this action can be undone by pressing Ctrl + V or clicking the Undo button on the toolbar until you save the PDF.

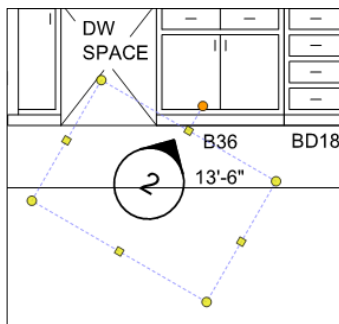

Cut Content

Move any piece of information on your PDF by cutting and pasting it. To begin, go to *Edit/Cut Content*. Your cursor will change to a crosshair. Drag the rectangular dotted blue line over the part of the document you wish to move elsewhere. This piece will be "cut," thus disappearing. Paste the content in the desired location, dragging it with your mouse if necessary.

Like Erase Content, this action can be undone if desired until you save the PDF.

Original document with markup

Markup enlarged, tilted and moved by using Cut Content
