# Revu Tutorial: Layers

Revu includes a way to view PDFs with Layers, combine multiple PDFs into one Layered PDF, or save your markups as Layers.

Viewing Layers

When opening a PDF file which contains Layers, Revu will ask you if you'd like to open the Layers tab for viewing. Click **OK** to open the Layers tab. You can also open the Layers tab by selecting *View/Tabs/Layers* ("Alt + O") or right-clicking on the tabs in the left panel.

To turn Layers on and off, click the 👁 icon to the left of the Layer title within the Layers tab. This icon indicates whether the Layer is visible or not.
Creating Layers

To save your markups as Layers in the PDF, create your markups and then go to *File/Flatten PDF*. In the Flatten Markups window, check the box next to **Create Layer**, enter a title for your new Layer and click **Flatten** to save the markups as a new Layer in the PDF file.

To combine multiple PDFs into a single layered PDF, go to *File/Create Layered PDF*. Use the Create Layered PDF window to select the PDF files you want to combine. You can combine PDFs you are currently working with by clicking **Add Open Files** or click **Add** to select other PDF files from your Windows folders. Click **OK** to create the new layered PDF file.
