# Revu Tutorial: Tablet PC Features

Revu includes features specifically designed for tablet PC users who are looking for a quick and easy way to review and markup PDF files.
Navigation – Revu uses tabbed navigation, making it easy to open and review multiple PDF files simultaneously. Double-tap on the workspace and a zoom control will appear. Simply slide your pen up/down to zoom in/out.

Profiles – Revu comes with multiple profiles, including a Tablet profile. Profiles are any easy way to change and reorganize the interface. Click the down arrow next to the Profile icon to select a different profile, or create your own.

Markup – Markup tools are located to the right of the main desktop workspace for quick access. The high-resolution Pen and Highlight tools make it easy to comment on a document with freehand text or diagrams. Use the top of the Pen as an eraser to delete any unwanted Pen marks. Lines, clouds, and images are within a few taps.

Text Box – Make use of the Windows Tablet PC Input Panel with text recognition when adding a Text Box, Callout, or Dimension annotation. All text is searchable.

Ink PDFs – The pen annotation lets users ink PDFs using pressure sensitivity. The ink tool is also compatible with OneNote and Journal, so you can copy and paste between these programs and Revu.

Page Insert – Click the Insert Blank Page button or go to either the thumbnail navigation or Document menu and click **Insert Blank Page**. A new page will be added to your document, giving you more work space for your comments or illustrations directly in Revu. Set a ¼" or 1/8" grid pattern on the page to add more detail or to set a scale.

Lasso – Select the lasso and draw a region with the pen to select all annotations included within that region. Once selected, annotations can be grouped into one annotation, copied, customized and/or moved all at once.

Full Screen Mode – The Revu interface can be changed to Full Screen mode by going to *View/Full screen* or by pressing keyboard shortcut "F11". Full Screen mode removes all panels, menus and toolbars from the interface for maximum PDF viewing and displays a floating toolbar that can be used to add markups while in this mode. The floating toolbar can be customized to display any markup tools you choose by right-clicking on the toolbar and selecting **Customize**.
