# Custom Valve Statuses

## Update a Valve Status with One Click

Bluebeam Revu's Manage Status feature can create Custom Statuses for annotations, such as colored symbols on a P&ID that represent open and closed valves. This allows you to change the color of an annotation with just one click from a drop down menu in the Markups list.

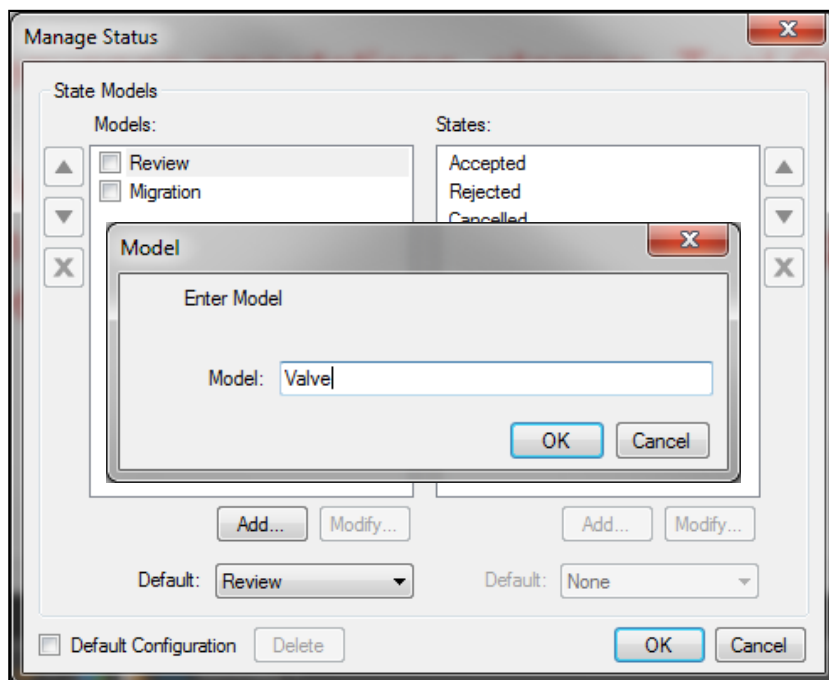

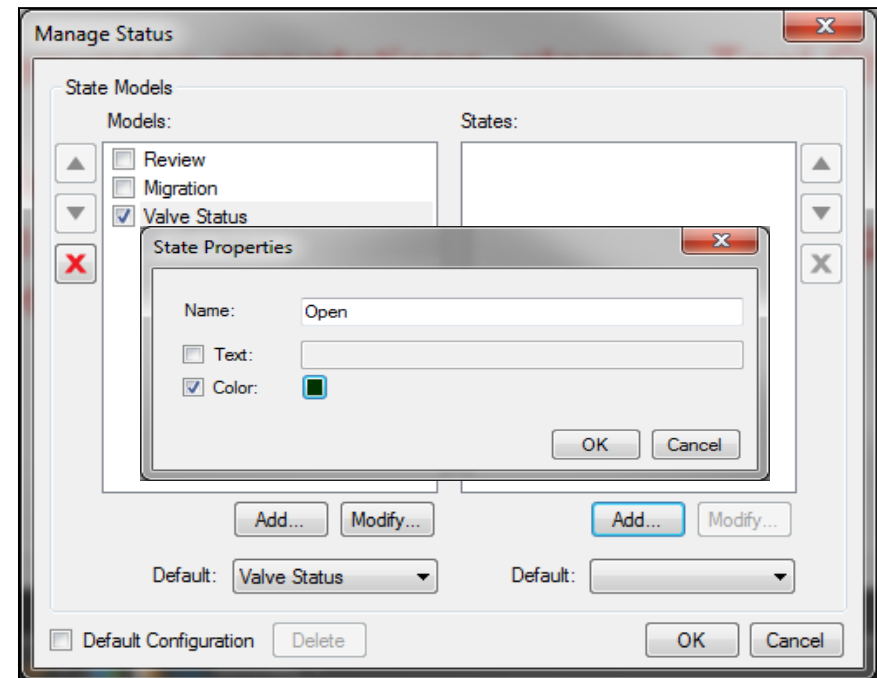

## Create a Custom Status

1. Select **Manage Status** from the **Markups list**.

**Manage Status**

2. Click **Add** under **Models** to create a **Custom Status Group**.

3. Click **Add** under **States** to create options and apply colors.

In the example below, the Custom Status Group contains two options: "Open", which turns the symbol green when selected, and "Closed", which turns it red when selected. Selecting the valve on the P&ID will simultaneously highlight the annotation in the Markups list.

Once highlighted, simply double-click on the annotation's **Status** to change its color from a drop down menu. The Markups list will also record who made the valve status update as well as the date and time it was changed.
