**Moving Tabs**

Select and drag a Tab by clicking and holding the left-mouse button on the Tab you wish to move. Drag the Tab either over the workspace or over to another dock area. Once at that location, release the mouse button. The tab will dock or float in that location until you decide to move it elsewhere.

Right-click the mouse on any Tab to display the Tab Menu. Here, you can **Show** other Tabs, **Hide** the current Tab or **Dock** the current tab to another location by selecting one of the list options.

The **Show** option lists the other available Tabs to display.

The **Hide** option removes the Tab from view.

The **Dock** option displays the 3 dock locations (left, right, and bottom) or the option to undock the Tab and float over the workspace.

The layout of the workspace will be saved in a configuration file and used for the next Revu session.

**Section I: Revu – Moving Tabs**
